Conclusion

Key Points

- Metabolic radiomics are helpful to predict the postsurgical seizure outcomes;

Key Points

- Metabolic radiomics are helpful to predict the postsurgical seizure outcomes;
- Combination of PET Radiomics and Clinical Features are more robust;

Key Points

- Metabolic radiomics are helpful to predict the postsurgical seizure outcomes;
- Combination of PET Radiomics and Clinical Features are more robust;
- IML technique can further deepen the understanding of the principle of ML models and the decision-making process for professional and intuitive interpretation

Limitations

- More data, especially external validation cohort;

Limitations

- More data, especially external validation cohort;
- Fusion of PET/MRI multimodal imaging;

Limitations

- More data, especially external validation cohort;
- Fusion of PET/MRI multimodal imaging;
- Other subtypes of drug-resistant epilepsy
